

1.write a c program to accept a file name & a single character.Display the count indicating total number of times character occurs in the file.

```
#include<stdio.h>
#include<stdlib.h>
#include<string.h>
#include<ctype.h>

int main()
{
    FILE *fp1;
    char c;
    char ai,s;
    char fname[20];
    int count=0;
    printf("enter the character to be counted:");
    scanf("%c",&ai);
    s=toupper(ai);
    //printf("enter the file name :");
    //scanf("%s",&fname);
    //fp1=fopen(fname,"r");
    fp1=fopen("Demo.txt",r);
    if(fp1==NULL)
    {
        printf("cannot open this file");
    }

    do
    {
```

```

        c=fgetc(fp1);
        if(c==ai || c==s)
        {
            count=count+1;
        }
    }

    while(c != EOF);
    printf("\nFILE '%s' has %d instances of letter
%c",fname,count,ai);
    return 0;
}

```

2.write a c program to accept two file name.copy the content of first file to the second such that the case of all alphabets is reversed.

```

#include<stdio.h>
#include<stdlib.h>
#include<string.h>
#include<ctype.h>

int main()
{
    FILE *fptr1, *fptr2;

```

```

char filename[100], c;

printf("Enter the filename to open for reading \n");
scanf("%s", filename);

// Open one file for reading
fptr1 = fopen(filename, "r");
if (fptr1 == NULL)
{
    printf("Cannot open file %s \n", filename);
    exit(0);
}

```

3.write a c program to accept a filename & count the number of words,line & characters in the file.

```

#include <stdio.h>
#include <stdlib.h>

int main()
{
    FILE * file;
    char path[100];
    char ch;
    int characters, words, lines;
    //printf("Enter source file path: ");
    //scanf("%s", path);
    //file = fopen(path, "r");
    file=fopen("Demo.txt","r");
    if (file == NULL)
    {

```

```
    printf("\nUnable to open file.\n");
    printf("Please check if file exists and you have read
privilege.\n");
```

```
    exit(EXIT_FAILURE);
}
characters = words = lines = 0;
while ((ch = fgetc(file)) != EOF)
{
    characters++;

    /* Check new line */
    if (ch == '\n' || ch == '\0')
        lines++;
    /* Check words */
    if (ch == ' ' || ch == '\t' || ch == '\n' || ch == '\0')
        words++;
}
if (characters > 0)
{
    words++;
    lines++;
}
printf("\n");
printf("Total characters = %d\n", characters);
printf("Total words    = %d\n", words);
printf("Total lines    = %d\n", lines);
fclose(file);

return 0;
}
```
